

Issues with PD L1 initial release

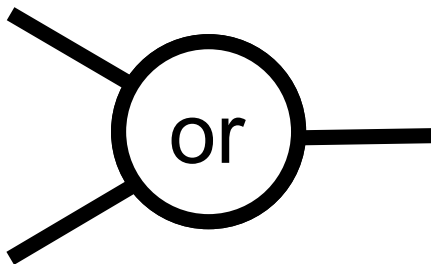

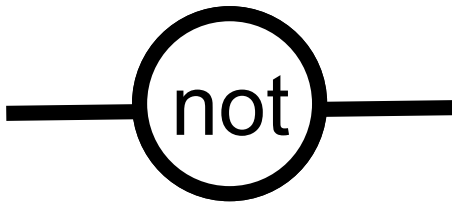

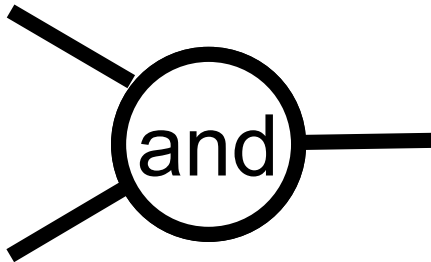

NLN

Classification of glyphs

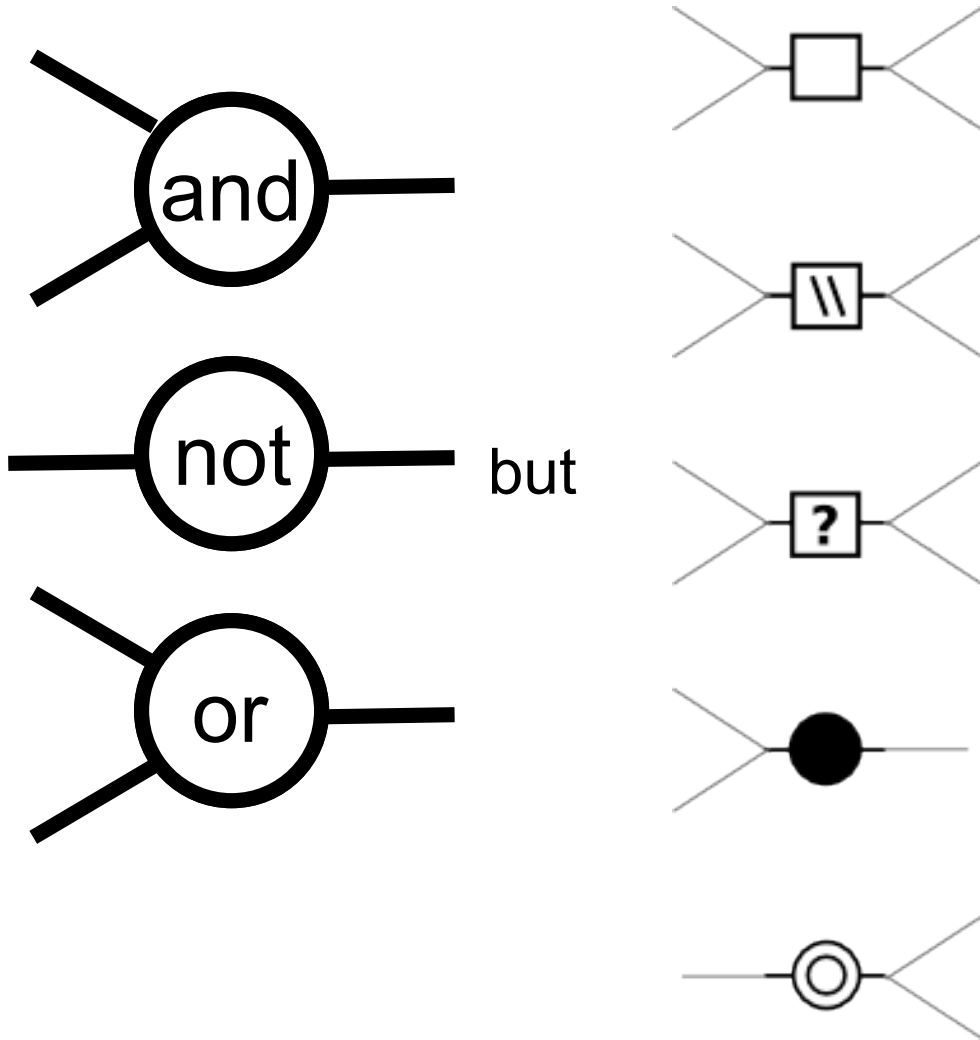

The “Container” class should maybe disappear

- Complex is an Entity Pool Node. The contained EPN are akin monomers in multimers
- Compartment is syntactically an Entity Pool Node
- Submap is syntactically a Process Node

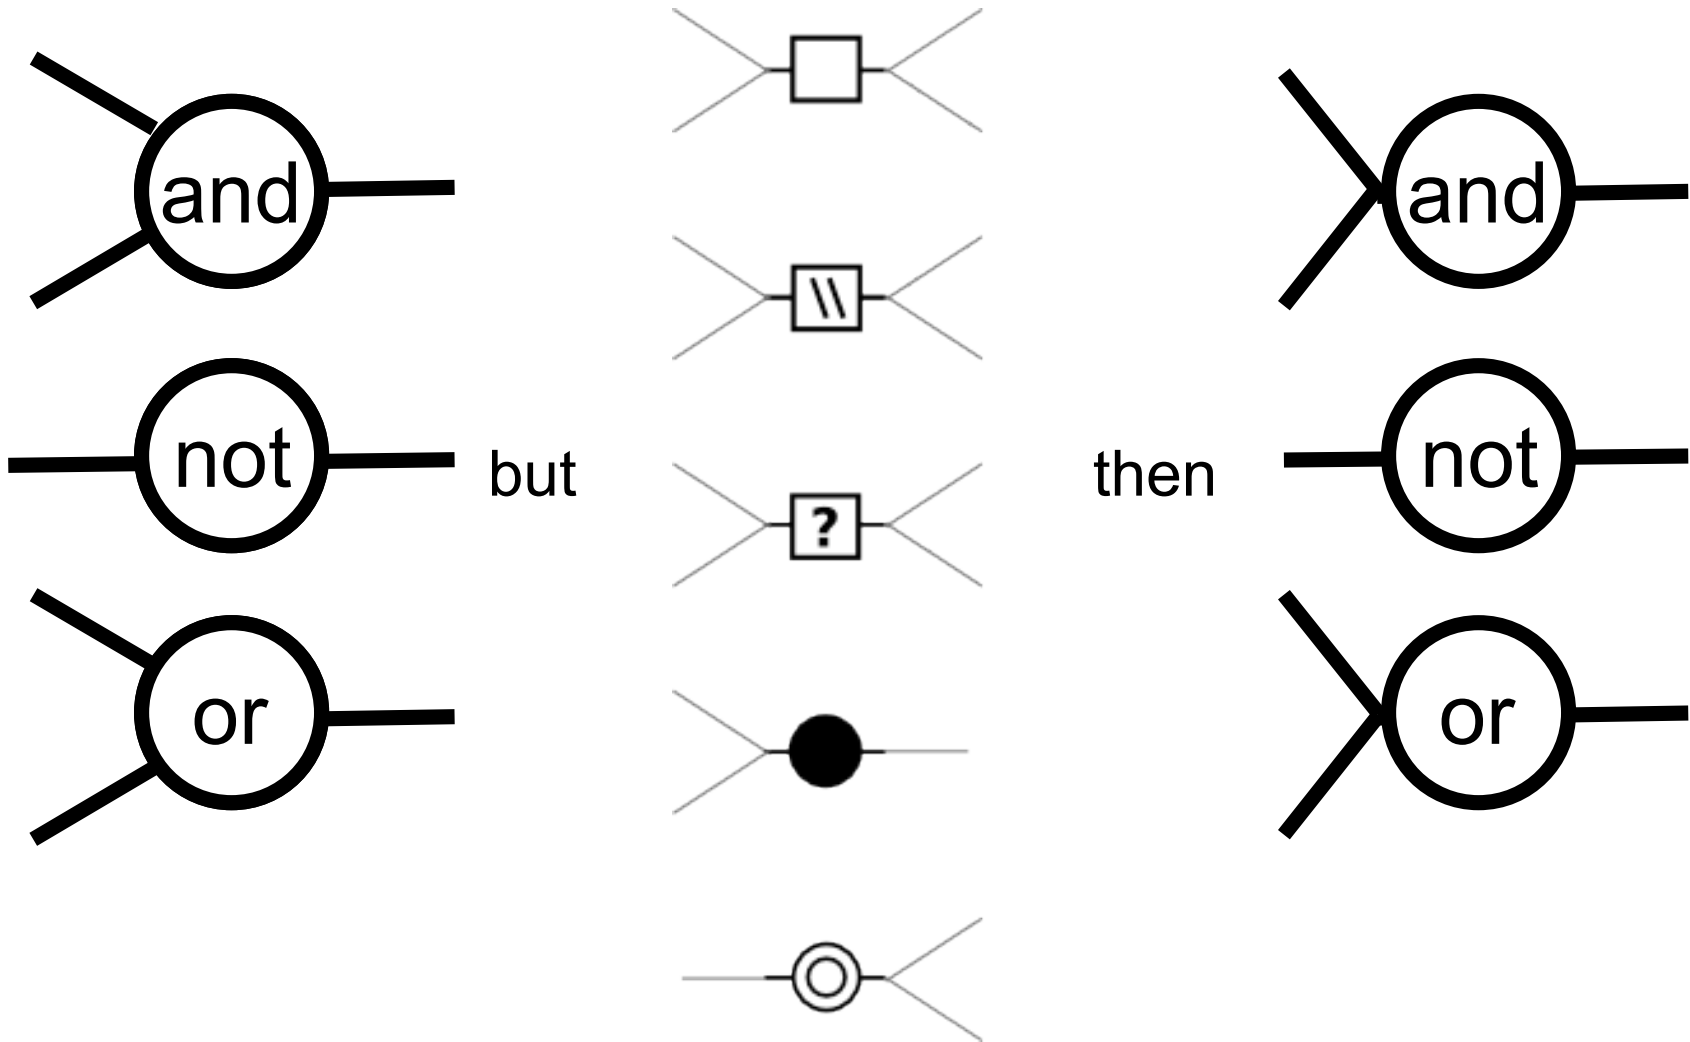

Terminals of logical operators

Terminals of logical operators

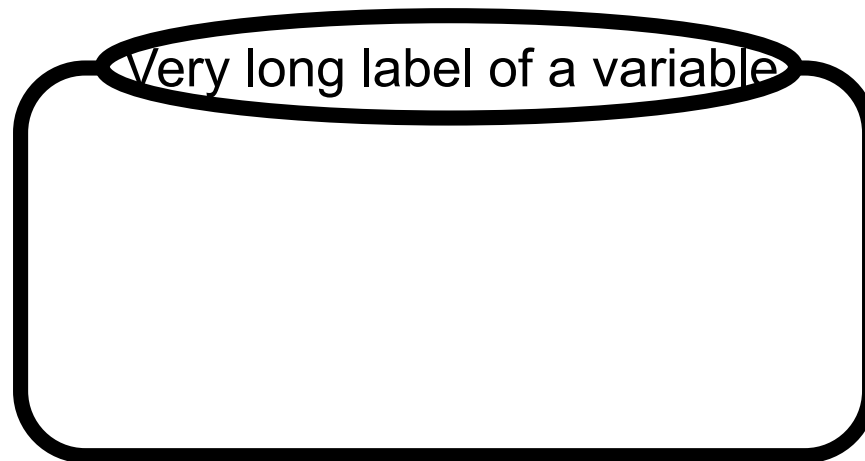

Terminals of logical operators

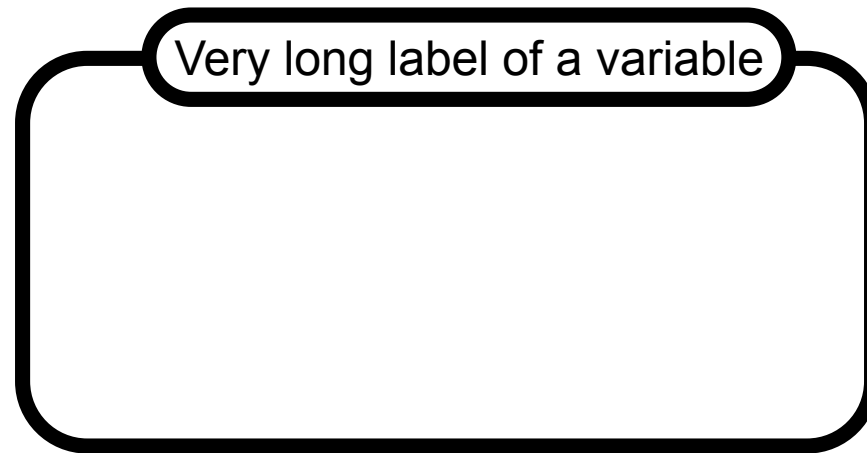

Shape of state variables

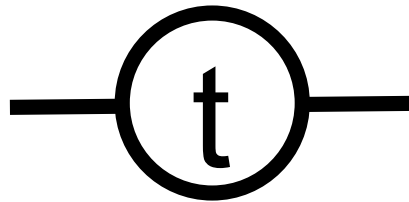

- Oval form came from the “generalisation” of circle
- Problem with long labels

Proposition: The “sausage” is also derived from a circle

Slightly out of scope*: Delay

* but there is a reason. It was a criticism from the audience of CIBB. I still think it should not be part of a new release, rather a new level/version. But I want to keep it on the radar.
